Domain: Number and Operations- Fractions		
Cluster 1		
Grade 3: Develop understanding of fractions as numbers.	Grade 4: Extend understanding of fraction equivalence and ordering.	Grade 5: Use equivalent fractions as a strategy to add and subtract fractions.
MAFS.3.NF.1.1 Understand a fraction 1/b as the quantity formed by 1 part when a whole is partitioned into b equal parts; understand a fraction a/b as the quantity formed by a parts of size 1/b.	Explain why a fraction a/b is equivalent to a fraction $(n \times a)/(n \times b)$ by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions.	MAFS.5.NF.1.1 Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. <i>For</i> <i>example</i> , $2/3 + 5/4 = 8/12 + 15/12 = 23/12$. (<i>In</i> <i>general</i> , $a/b + c/d = (ad + bc)/bd$).
 MAFS.3.NF.1.2 Understand a fraction as a number on the number line; represent fractions on a number line diagram. a. Represent a fraction 1/b on a number line diagram by defining the interval from 0 to 1 as the whole and partitioning it into <i>b</i> equal parts. Recognize that each part has size 1/b and that the enpoint of the part based at 0 locates the number 1/b on the number line. b. Represent a fraction <i>a/b</i> on a number line diagram by marking off <i>a</i> lengths 1/<i>b</i> from 0. Recognize that the resulting interval has size <i>a/b</i> and that its endpoint locates the number a/<i>b</i> on the number line. 	Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as 1/2. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols >, =, or <,	MAFS.5.NF.1.2 Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. <i>For</i> <i>example, recognize an incorrect result</i> $2/5 + 1/2 =$ 3/7, by observing that $3/7 < 1/2$.

MAFS.3.NF.1.3	
Explain equivalence of fractions in special cases,	
and compare fractions by reasoning about their	
size.	
a. Understand two fractions as equivalent	
(equal) if they are the same size, or the	
same point on a number line.	
b. Recognize and generate simple equivalent	
fractions, e.g., $1/2 = 2/4$, $4/6 = 2/3$).	
Explain why the fractions are equivalent,	
e.g., by using a visual fraction model.	
c. Express whole numbers as fractions, and	
recognize fractions that are equivalent to	
whole numbers. Examples: Express 3 in	
the form $3 = 3/1$; recognize that $6/1 = 6$;	
locate 4/4 and 1 at the same point of a	
number line diagram.	
d. Compare two fractions with the same	
numerator or the same denominator by	
reasoning about their size. Recognize that	
comparisons are valid only when the two	
fractions refer to the same whole. Record	
the results of comparisons with the	
symbols >, =, or <, and justify the	
conclusions, e.g., by using a visual fraction

Cluster 2				
	Grade 4: Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers.	Grade 5: Apply and extend previous understandings of multiplication and division to multiply and divide fractions.		
	 as joining and separating parts referring to the same whole. b. Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation. Justify decompositions, e.g., by using a visual 	denominator ($a/b = a \div b$). Solve word problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers, e.g., by using visual fraction models or equations to represent the problem. For example, interpret 3/4 as the result of dividing 3 by 4, noting that 3/4 multiplied by 4 equals 3, and that when 3 wholes are shared equally among 4 people each person has a share of size 3/4. If 9 people want to share a 50-pound sack of rice equally by weight, how many pounds of rice should each person get? Between what two whole numbers does your answer lie?		

Apply and extend previous understandings of	 MAFS.5.NF.2.4 Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction. a. Interpret the product (a/b) × q as a parts of a partition of q into b equal parts; equivalently, as the result of a sequence of operations a × q ÷ b. For example, use a visual fraction model to show (2/3) × 4 = 8/3, and create a story context for this equation. Do the same with (2/3) × (4/5) = 8/15. (In general, (a/b) × (c/d) = ac/bd.) b. Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.
	 MAFS.5.NF.2.5 Interpret multiplication as scaling (resizing), by: a. Comparing the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication. b. Explaining why multiplying a given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explaining why multiplying a given number; and relating the principle of fraction equivalence a/b = (n×a)/(n×b) to the effect of multiplying a/b by 1.

MAFS.5.NF.2.6 Solve real world problems involving multiplication of fractions and mixed numbers, e.g., by using visual fraction models or equations to represent the problem.
 MAFS.5.NF.2.7 Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions. a. Interpret division of a unit fraction by a non-zero whole number, and compute such quotients. For example, create a story context for (1/3) ÷ 4, and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that (1/3) ÷ 4 = 1/12 because (1/12) × 4 = 1/3. b. Interpret division of a whole number by a unit fraction, and compute such quotients. For example, create a story context for 4 ÷ (1/5), and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that (1/3) ÷ 4 = 1/12 because (1/12) × 4 = 1/3. c. Solve real world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers and division of whole numbers by unit fractions by non-zero whole numbers and division of whole numbers by unit fractions by non-zero whole numbers and division of whole numbers by unit fractions to represent the problem. For example, how much chocolate will each person get if 3 people share 1/2 lb of chocolate equally? How many 1/3-cup servings are in 2 cups of raisins?

Domain: Number and Operations- Fractions			
Cluster 3			
Grade 3	Grade 4: Understand decimal notation for fractions and compare decimal fractions	Grade 5	
	MAFS.3.NF.3.5 Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100. <i>For example, express 3/10 as 30/100, and add 3/10 + 4/100 = 34/100.</i>		
	MAFS.3.NF.3.6 Use decimal notation for fractions with denominators 10 or 100. For example, rewrite 0.62 as 62/100; describe a length as 0.62 meters; locate 0.62 on a number line diagram.		
	MAFS.3.NF.3.7 Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols >, =, or <, and justify the conclusions, e.g., by using a visual model.
