

Mathematics for College Algebra Year at a Glance

Scope and Sequence 2025 - 2026

Please Note: All standards in the state course description are designed to be learned by the end of the course. This guide represents a recommended timeline and sequence to be used voluntarily by teachers for planning purposes. Specific question regarding when content will be addressed in a specific course are best answered by the individual teacher.

Course Resources

Publisher Resource:

College Algebra and Trigonometry 7e, Savvas Learning Company LLC

Supplemental Resources:

[Khan Academy](#) (does not support Internet Explorer)

In Mathematics for College Algebra, instructional time will emphasize five areas:

- (1) Developing fluency with the Laws of Exponents with numerical and algebraic expressions.
- (2) Extending arithmetic operations with algebraic expressions to include rational and polynomial expressions.
- (3) Solving one-variable exponential, logarithmic, radical and rational equations and interpreting the viability of solutions in real-world contexts.
- (4) Modeling with and applying linear, quadratic, absolute value, exponential, logarithmic and piecewise functions and systems of linear equations and inequalities.
- (5) Extending knowledge of functions to include inverse and composition

Mathematics for College Algebra Year at a Glance

Quarter 1 (August 11 – October 10)

Chapter R: Review of Basic Concepts

Students will review concepts from Algebra 2, including real number operations, integer and rational exponents, polynomials, and rational and radical expressions. Students will build on these skills throughout the remainder of the course.

Chapter 1: Equations and Inequalities

Students will work with linear, quadratic and rational equations. They will write and solve these equations using real-world scenarios. Students will write and solve linear and absolute value inequalities.

Quarter 2 (October 14 – December 19)

Chapter 2: Graphs and Functions

Students will identify a function from a given scenario, they will create linear models. Students will be able to write and graph linear models in various forms (point-slope, slope-intercept, and standard form). They will be able to identify key features of the graphs and provide solutions to equations from a graph. Students will also learn graphing techniques that will stretch/shrink, reflect, and translate graphs. Students will perform operations and compositions on given functions.

Chapter 9: Systems

Students will graph and solve systems of linear equations and inequalities.

Quarter 3 (January 5 – March 12)

Chapter 3: Polynomial and Rational Functions

Students will use identify zeros of polynomial functions using synthetic division, remainder theorem, factor theorem, and rational zeros theorem. Students will use the zeros of the function to graph polynomials and describe key features of the graph (including end behavior, domain, range, behavior of zeros, and intercepts). Students will graph rational functions and identify vertical and horizontal asymptotes of these function.

Mathematics for College Algebra Year at a Glance

Quarter 4 (March 23 – May 29)

Chapter 4: Inverse, Exponential, and Logarithmic Functions

Students will graph and solve exponential and logarithmic equations. Students will learn about the inverse relationship between logarithmic functions and exponential functions. They will create equations that model real-world scenarios of exponential growth and decay.
